## Pressure Transmitters for General Purpose

### Description

The 131F is a general-purpose pressure transmitter featuring a monolithic-structure pressure port. Depending on the BCM high-quality metal foil strain gauge, this model provides excellent thermal stability and high accuracy. The transmitter is suitable for applications of processing and control operations especially involving temperature variation. Offering numerous options of process connection and electrical interface, the 131F can fit most industrial pressure measurement systems.

The 131F consists of a 17-4PH stainless steel (SS) wetted parts (including diaphragm) and a 304 SS housing so that it can be used for measurements involving hostile media. And the transmitter doesn't need to have an O-ring sealing internally. Featuring an inner-cavity process connection, the transmitter is specially designed to measure pressures of dilute fluids with gauge pressure reference.

By selecting proper electrical interface, the 131F is able to reach the environmental protection rating up to IP67.

### Features

- monolithic and rugged structure of the wetted parts
- excellent thermal stability
- measuring ranges: 16, ..., 400 bar
- accuracy up to 0.1%fs
- selectable output:  
4~20 mA (standard), 0.5~4.5V ratiometric and others.
- wide choice of process connection and electrical interface
- protection rating up to IP67

### Applications

- mechanical engineering
- hygienic applications
- hydraulics and pneumatics
- compressor and pump systems
- liquid level measurement
